

## **Withdrawal of Requirement to Test POSTs for CMD6 – Oyster™ Media**

### **Testing of POSTs with CMD6 media**

The ITSO Specification includes a Customer Media Definition (CMD) allowing for Mifare® Classic Media issued Oyster™ (or possibly others) to be loaded with an ITSO Application (compact Shell), known as CMD6. No CMD6 have been used in live applications nor have any products been registered to the ISMS.

The ITSO Board has resolved that that the requirement for the certification and support in POST applications should be removed for the Mifare® Classic variant known as CMD6 with immediate effect.
